## What is **judicial backsliding**?

-The process through which duly-elected executives reduce court independence and thus collapse the separation of powers

-Institutional changes achieved through various devices in the autocrat's toolbox

# How does it occur?

## The Autocrat's toolbox for judicial backsliding

<b>Type of assault</b>	<b>Examples</b>	<b>Observable implications</b>
Assaults on court powers	Court stripping (limiting or changing the type and scope of judicial review); creating new courts or judicial hierarchies; limiting access and availability of judicial review and remedies; constraining judges through voting rules; empowering other political actors to intervene in legal processes.	Courts vulnerable to such assaults show extreme congruence between their decisions and the executive's preferred policy positions.
Assaults on judicial personnel	Changing rules regarding judicial selection, discipline and removal; forcing judges off courts (purges) in order to bring in quiescent judges (packing). Creating subordinate bodies to the executive, such as judicial commissions, that select, discipline, and remove judges.	Purges and packing eliminate or intimidate judges willing to challenge executive preferences.
Defunding	Reducing funding for courts and judges' salaries; manipulating court budgets and who controls them.	Courts vulnerable to defunding align rulings with those in charge of budgets.

# Relevant theories related to judicial independence

## 1. Political fragmentation

-Courts are likely to have less independence (and be more deferential to the executive) when executive's have more party support in the legislature.

-Conversely, the judiciary should be more independent under divided or fragmented government... and thus attacks should be less likely

(McCubbins, Noll and Weingast 1995, 2006; Eskridge 1991; Gely and Spiller 1990; Bergara et al. 2003; Iaryczower, et al. 2002).

# Theory

## 2. Horizontal constraints

While executives are likely to initiate backsliding efforts, *legislatures* and other agencies are consequential

- Legislatures and other agencies have to acquiesce, or even support, executive efforts to weaken horizontal checks
- Judicial independence hinges on legislatures and other agencies checking executives
- As horizontal constraints on the executive decrease, attacks on the judiciary are more likely.

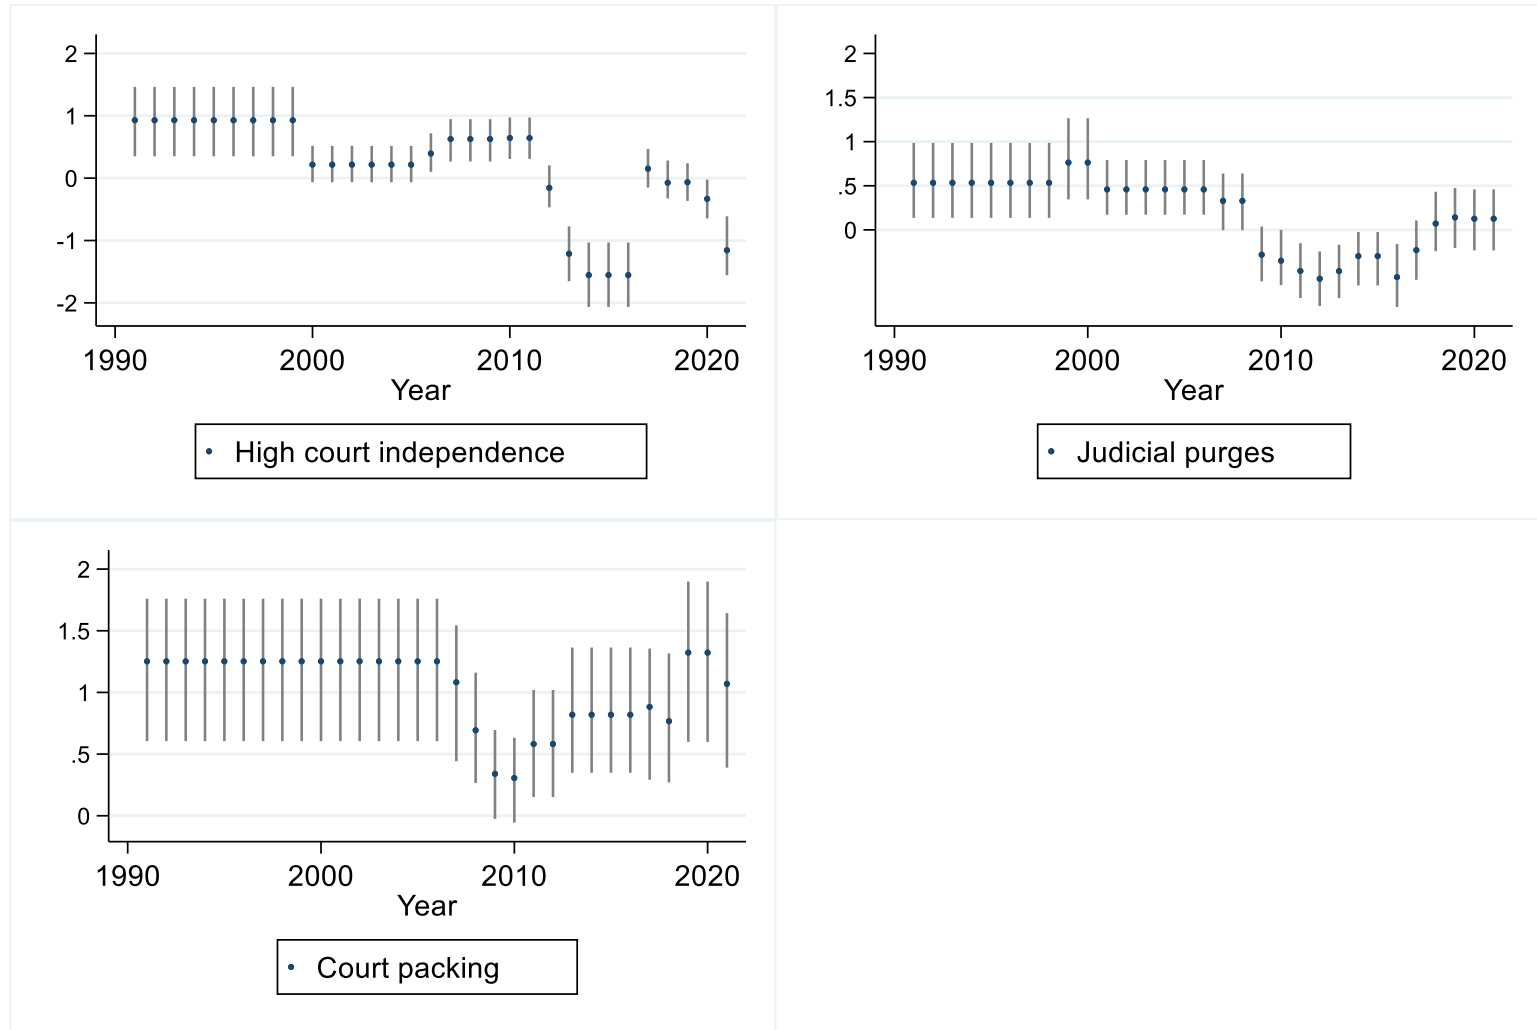

(See generally O'Donnell 1998; Fish and Kroenig 2012)

# Countries meeting criteria for electoral democracy sample, 1990-2021

Albania	Dominican Republic	Lithuania	Serbia
Argentina	Ecuador	Luxembourg	Sierra Leone
Australia	El Salvador	Madagascar	Slovakia
Austria	Estonia	Mali	Slovenia
Bangladesh	Finland	Malta	Solomon Islands
Barbados	France	Mauritius	South Africa
Belgium	Georgia	Mexico	South Korea
Benin	Germany	Moldova	Spain
Bhutan	Ghana	Mongolia	Sri Lanka
Bolivia	Greece	Namibia	Suriname
Bosnia and Herzeg.	Guatemala	Netherlands	Sweden
Botswana	Guyana	New Zealand	Switzerland
Brazil	Honduras	Nicaragua	Taiwan
Bulgaria	Hungary	Niger	Thailand
Burkina Faso	Iceland	North Macedonia	Timor-Leste
Canada	India	Norway	Trinidad and Tobago
Cape Verde	Indonesia	Panama	Tunisia
Chile	Ireland	Papua New Guinea	Turkey
Colombia	Israel	Paraguay	Ukraine
Costa Rica	Italy	Peru	United Kingdom
Croatia	Jamaica	Philippines	USA
Cyprus	Japan	Poland	Uruguay
Czech Republic	Latvia	Portugal	Venezuela
Denmark	Lesotho	Romania	Zambia
	Liberia	Senegal	

# Visualizing statistically significant backsliding

## Judicial backsliding in North Macedonia (1991-2021)

## Number of countries with judicial backsliding onsets

High court independence	36
Judicial purges	49
Court packing	27

## Statistical Results

Weakening of horizontal constraints leads to **judicial backsliding onsets**; but the executive's party control in the legislature is not statistically significant.

The executive's party support in the legislature may, however, make judicial backsliding last longer or influence duration

**Populist leaders in power** (favoring majoritarian institutions) more likely to attack courts and judicial independence

# Regularity of theory relating **weakening of horizontal constraints** to judicial backsliding

Unit of analysis	High court Independ.	Purges	Packing
# Countries with theorized regularity/ # Countries with onsets	28/36 78%	30/49 61%	17 /27 63%

# Case studies: Pinpointing the mechanisms leading to judicial backsliding onsets

Example: North Macedonia, clearer case of lack of horizontal constraints on the executive

- Evidence of opposition missing from National Assembly
- Evidence of boycotts and closure
- Evidence of oversight committees not meeting
- Evidence of manipulation of Judicial Council
  
- but some evidence of executive's party strength in the legislature allows PM Gruevski to achieve his agenda

Larger research project will verify evidence within each judicial backsliding country for posited causal mechanism and also look for other determinants.

## What about the reverse? **Judicial resurgence**

-What conditions and how do countries high courts recover from judicial backsliding?

-Judicial resurgence: statistically significant increases in judicial independence following judicial backsliding incidents.

# The Democrat's toolbox for judicial resurgence

Type of assault from which recovery needed	Potential tools to re-establish judicial independence
Assaults on court powers	<p><b>Restore</b> powers to courts that were previously stripped, such as judicial review; Either <b>eliminate new courts or judicial hierarchies</b> created by autocrats to gain control or ensure that they <b>meet democratic standards of accountability and transparency</b>; <b>restore access</b> and availability of judicial review and remedies; <b>increase judges' discretion</b>; <b>limit ability of other political actors to intervene</b> in legal processes.</p>
Assaults on judicial personnel	<p><b>Evaluate and if needed reverse rules</b> used by autocrats to gain control of the judiciary related to judicial selection, discipline and removal; <b>Attempt to reverse court packing and purging</b> by prior autocrats in the most democratic way possible, <b>avoiding criticism of “militant democracy.”</b></p>
Defunding	<p><b>Restore</b> funding for courts and judges' salaries; protect judicial budgets. Establish <b>safeguards</b> to end manipulation through funding.</p>

# Determinants of resurgence: Preliminary evidence

Crucial election: Replace autocratic incumbent or shift in party configuration of seats in legislature

Increase horizontal accountability on the executive

-Put differently, judicial independence hinges on legislatures and other agencies checking executives

Divided government contributes to resurgence

-May ensure that governments wanting to pass legislation to restore judicial independence need to compromise more

# Judicial backsliders with and without resurgence, 1990-2021

Judicial backsliders with resurgence	Judicial backsliders without resurgence	Judicial backsliders with backsliding continuing until 2021	
<b>Argentina</b>	<i>Bolivia</i>	Bangladesh	Portugal
<b>Ecuador</b>	<i>Brazil</i>	Benin	Suriname

<b>Spain</b>		Philippines	
<b>Ukraine</b>		Poland	

# Share of cases with posited mechanisms

12/12 Horizontal constraints increased (  $\Delta$  variable constructed from Vdem)

10/12 Opposition party gains (NELDA)

9/12 Decrease in government coalition seat share (DPI)

7/12: Incumbent's party loses (NELDA)

6/12: Incumbent leader replaced (NELDA)

# Case study

## North Macedonia: Jbacksliding 2012 to 2016/ rebound 2017

### Rebound (DV):

In 2017, the EU Senior Experts group made recommendations for systematic and urgent rule of law reforms for the country. In May of 2017, the new SDSM-DUI-AA government put through a reform plan in response to the recommendations referred to as 3-6-9 for implementation of the plan over three-month time periods.

### Independent variables:

-Increase in horizontal constraints: Creation of special prosecutor's office (SJO) to deal with Gruevski's wire tapping scandal in 2016

-New leaders: resignation of Prime Minister Gruevski in 2016 resulting from the Pržino Agreement negotiated in 2015. In 2017, President Ivanov gave Zaev formed a new government coalition made up of his party, SDSM, the DUI, and the Alliance of Albanians : **first major power shift since Gruevski.**

Government party vote share : Decreased from the time that Gruevski left office to Zaev's assumption of power

# Resurgence is fragile

- SJO had its own scandals and eventually disbanded
- Civil society protest against judicial reforms in 2017 as not going far enough
- VMRO won power back in 2024

# Future research

- Other areas to explore
  - Strength and role of civil society
  - Strength and role of international, regional organizations and advocacy groups
  - Role of monitoring rule of law reforms
  - Societal and political polarization

Thank you!

# Judicial resurgence

## Statistical Results: Judicial resurgence

Strengthening horizontal constraints makes onsets of judicial resurgence more likely;

More political fragmentation or a decrease in the governing party/coalition's seat share in the legislature makes judicial resurgence more likely.

# High court resurgence: Biprobit and Heckprobit models

VARIABLES	Biprobit		Heckprobit	
	Resurgence	Backsliding	Resurgence	Backsliding
Decr. Horizontal constraints	-1.56*** (0.44)	0.76*** (0.28)	-1.20*** (0.41)	0.25** (0.10)
